

Its working on 2025-q1

Its working on 2025-q2

Its working on 2025-q3

```
pipeline {
   label 'built-in'
   CONTAINER_NAME="httpd-${env.BRANCH_NAME}"
   PORT="${env.BRANCH_NAME == "2025-q1"?'80': env.BRANCH_NAME == "2025-q2"?'90': env.BRANCH_NAME == "2025-q3"?'91': '85' }"
       cleanWs()
       checkout scm
       sh 'ls -lrta'
       sh 'pwd'
   stage('build'){
        //copy index.html into another folder
        sh 'mkdir -p website'
        sh 'cp index.html website/'
         // docker run
        docker run -itdp \$PORT:80 --name \$CONTAINER_NAME -v \$WORKSPACE/website://usr/local/apache2/htdocs/ httpd
1) Inside ''' ''' tripal comma we need to give escape sequences like \$BRANCH_NAME.
2) Inside ' ' single and " " double inverted comma we dont need to give escape sequences we simply use $BRANCH_NAME.
3) Checkout scm is used to clone repo without using git clone
4) $BRANCH_NAME is in-built environment veriable which will provide current branch name
```
